

Veeam Duplicate UUID

This is to bypass the UUID check if you have restored an old back to new hardware for example a laptop or physical PC.

REGEDIT

To 'EnableSystemUuidFailover' key should be added on each Veeam Agent host with non-unique ID.

This is the key enabling Veeam failover logic.

Name: EnableSystemUuidFailover
Path: HKLM\SOFTWARE\Veeam\
Type: DWORD
Value: 1

Then a unique ID should be assigned manually on each Agent station.
Another Veeam registry should be added on each host for it:

Name: SystemUuid
Path: HKLM\SOFTWARE\Veeam\
Type: REG_SZ
Value: {a custom UUID}

Custom UUID should correspond with the standard UUID format rules, brackets are required.

You can use some online generator for it (<https://www.uuidgenerator.net/>) or put some your own strings there.

Rescan protection group and you are deployed now

Disable "Windows recovery image file not found" warning

You can add AgentsDisableRECollectionWarning key here
HKEY_LOCAL_MACHINE\SOFTWARE\Veeam\Veeam Backup and Replication to disable this warning.
Name: AgentsDisableRECollectionWarning
Path: HKLM\SOFTWARE\Veeam\
Type: DWORD
Value: 1
