

VMWare - Install Windows 11 on vCenter 8 without TPM 2.0

Create a VMWare to host Windows 11 without having a virtual TPM or device installed.

Once you are at this step you have to hit "**Shift-F10**" to open up the command prompt

 and or type unknown

Once the command prompt window is opened type "**regedit**"

 and or type unknown

Once opened then navigate to "**HKEY_LOCAL_MACHINE, SYSTEM, Setup**" and then right-click and add a "**New, Key**"

 and or type unknown

Add the key called "**LabConfig**" then right-click on the "**LabConfig**" and add a new "**DWORD Value**"

 and or type unknown

Add the new value called "**ByPassTPMCheck**" with a hexadecimal of "**1**"

 and or type unknown

Close every window then click on "**Install Now**" but do not reboot or the new added key will be lost.

 and or type unknown
