Redis - Installation on RedHat 9

Install the Latest Version using the Remi Repository

For the latest stable version of Redis, you can use the Remi repository, which provides more recent packages for RHEL derivatives.

1. **Install the Remi repository configuration package**:

```
sudo dnf install -y https://rpms.remirepo.net/enterprise/remi-release-9.rpm
```

2. **Enable the specific Redis module stream** (e.g., Redis 8.10) from the Remi repository:

```
sudo dnf module switch-to redis:remi-8.10/common -y
```

3. **Install Redis**:

```
sudo dnf install -y redis
```

4. **Start and enable the Redis service**:

```
sudo systemctl enable --now redis
```
